What To Do If You Think You Were In Contact With A COVID-19 Case

Do NOT share anyone else’s private health information (PHI).

Is it a lab confirmed case?

Yes

1. Public Health will already have been notified by the testing lab.
2. Public Health will notify close contacts of the case and guide next steps in coordination with UHS.
3. Employees/Students will not return to campus until cleared by UHS/Public Health.
4. Contact EH&S to schedule extra cleaning and follow best hygiene practices below.

Test Returns Positive

Test Returns Negative

No but testing was performed

1. People have the right to share their private health information if they wish, but no obligation. We generally recommend against disclosure to groups, as it causes anxiety and no additional measures are recommended.
2. You will not be informed of the results, however see “Yes” category.

No and they were NOT tested

1. People have the right to share their private health information if they wish, but no obligation. We generally recommend against disclosure to groups, as it causes anxiety and no additional measures are recommended.
2. People should continue to practice healthy hygiene, physical distancing, and wearing a face covering when going out.

Not a Direct Contact (friend of a friend)

People are advised to remain at home for 24 hours after symptoms resolve.

Hygiene Best Practices

All students and employees should:
- Monitor for symptoms and stay home if sick and call your health care provider
- Hand wash regularly and practice physical distancing, only go out for essential needs
- Wear a face covering that covers your nose and mouth when leaving home
- Protect vulnerable populations (send home those caring for elderly, chronically ill) or those who consider themselves in the vulnerable population
