Tips to help lower alcohol consumption

Small changes to how much alcohol you drink can benefit your body immensely and reduce your chances of having alcohol-related problems.

Here are some suggestions that may help you reach your goals of reducing your alcohol consumption. Check off one or two to try in the next week or two.

- **Set goals.** Examine how many days in a week you drink and try to decrease it by one day.
- **Pace and space.** When you drink, pace yourself. Sip slowly. Have no more than one standard alcoholic drink per hour. Have "drink spacers" – make every second drink a glass of water.
- **Include food.** Don't drink on an empty stomach. Eat some food so the alcohol will be absorbed into your system slower.
- **Find alternatives.** If drinking has occupied a lot of your time, look at alternative new, healthy activities, and hobbies, or return to old ones you've missed.
- **Avoid "triggers."** What triggers your urge to drink? If certain people or places make you drink even when you don’t want to, try to avoid them. If certain activities, times of day, or feelings trigger the urge, plan something else to do instead of drinking. If drinking at home is a problem, keep little or no alcohol there.
- **Seek support:** Talk with someone you trust, or contact a professional for advice. If you are concerned about your drinking or a family member’s, call CARE Services at 510-643-7754.
- **Know your "no.** You're likely to be offered a drink at times when you don't want one. Have a polite, convincing "no, thanks" ready. The faster you can say no to these offers, the less likely you are to give in. If you hesitate, it allows you time to convince yourself to have an alcoholic drink.

One Drinking Unit Equals:

- 12 fl oz Regular beer (about 5% alcohol)
- 5 fl oz Table wine (about 12% alcohol)
- 1.5 fl oz 80-proof distilled spirits (40% alcohol)
Know Your Drinking Numbers

What is “at-risk” drinking?
For adults, drinking more than the single-day OR weekly amounts shown below is considered “at-risk” or “heavy” drinking.

- **Men**: 4-14 drinks
  - No more than 4 drinks on any day
  - No more than 14 drinks in one week

- **Women**: 3-7 drinks
  - No more than 3 drinks on any day
  - No more than 7 drinks in one week

To stay low risk, keep within BOTH the single-day AND weekly limits

Examples of the Health Impact 1-3 Alcohol Drinks has on the Body
